

ADS Sequencing Reaction Cleaning Beads

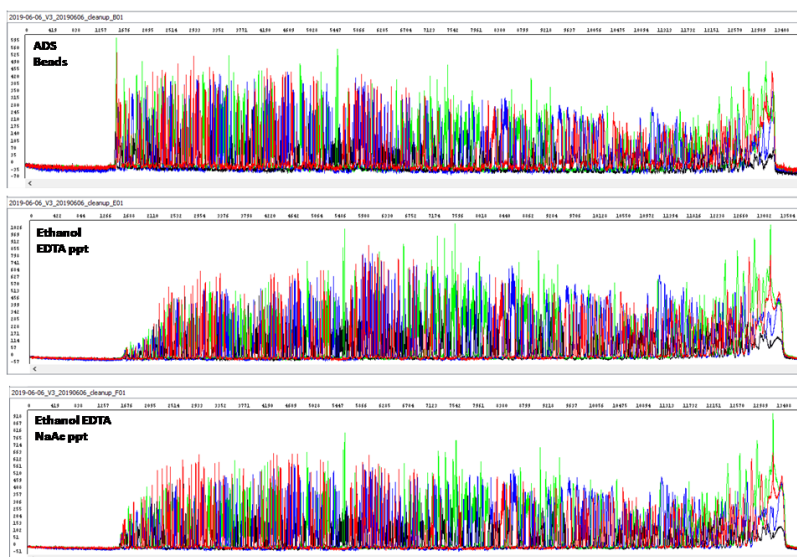

Successful cycle sequencing reactions would not bring high-quality sequencing results without an effective sequencing reaction purification step. Although the traditional ethanol precipitation is cost-effective, the multi-step purification procedure needs extra caution from operators to prevent sample loss and it is labor intensive as well.

ADS™ Sequencing Reaction Cleaning Beads is cost-effective for labs that are mindful about their sequencing cost. The cleaning beads are specifically optimized for the Sanger sequencing reaction clean-up to minimize sample loss while removing undesired components such as unused dyes and dNTPs.

In addition to ADS™ Sequencing Reaction Cleaning Beads, we offer rapid and simple ADS™ XT Purification Kit. This kit, as a high-performance alternative to XTerminator™ Purification Kit, is ideal for labs that ask for lower risk of sample and signal loss.

ADS™ Sequencing Reaction Cleaning Beads, like ADS™ SupreDye XT Purification Kit, have different packaging sizes to meet the needs for both high-throughput commercial service providers and regular core labs.

ADS™ Sequencing Reaction Cleaning

Catalog Numbers	Unit Size
080008	8 ml
080050	50 ml
080250	250 ml
081000	4X250 ml

ADS™ XT Purification Kit

Catalog Numbers	Unit Size
160001	100 preps (2 ml)
160010	1000 preps (20 ml)
160025	2500 preps (50 ml)
160400	40,000 preps (800 ml)
